

Task 1: Create an `EntityManager` and ask it to retrieve a `Message` object by its `id` value, and then ask the same `EntityManager` to retrieve another `Message` object with the same `id` as the first one. Find out whether the `EntityManager` makes a database call when retrieving the second `Message` object?

Task 2: Create an `EntityManager` and ask it to retrieve a `Message` object by its `id` value, and then create another `EntityManager` to retrieve another `Message` object with the same `id` as the first `Message` object. Find out whether the second `EntityManager` makes a database call when retrieving the second `Message` object?

***The source code files for the lecture on "Caching Objects" are available to be downloaded with this lab exercise. You could use them to complete the given tasks successfully.
